BLOG ENTRY TITLED “PROJECT PROPOSAL”

- Date (might automatically show)
- Project Title
- Course Title, College name
- Project Overview – A brief description of your project.
- Statement of Development - How is this proposed project a “stretch” for you? What skills or abilities will you develop that you don’t now have?
- Detailed Project Description – Detailed definition of the activities or tasks to be performed, the intended deliverables (specifically what do you intend to do and what will you produce).
- Major Tasks and Milestones - Measurable project tasks and milestones with expected completion dates against which progress can be measured.
- Resource Requirements – Detailed list of materials or other resources that will be needed to conduct the project such as software access, access to lab equipment or tools, etc.
- Sources – List any support or information sources you intend to utilize in conducting the project.

DESN225 – SPRING 1012 | Project Selection Criteria

- The project should be something that is a “stretch” for you and not just more of what you have already done in your academic career.
- After completing the project you should have new skills or abilities and should have something unique and significant to include in your portfolio. A prospective employer should be able to look at your project work and see that you can act with initiative and creativity and are not bound solely by what curriculum content leads you through.
- You may choose to work with a single partner on your project. However, you should make it clear from the outset how the project work will be divided and how each of you will meet the first two criteria.
- Your project be scoped such that you can complete it during the semester.
- You should choose something for your project that you can work on during class. There will be significant class time set aside for project work.
